

Data Privacy Vault for PII

Secure customers' PII data across your stack. Easily **isolate, protect, and govern** sensitive data with a zero trust architecture.

Secure Sensitive Data

Protect and de-identify sensitive data using patented **polymorphic encryption** and **tokenization**.

Simplify Compliance

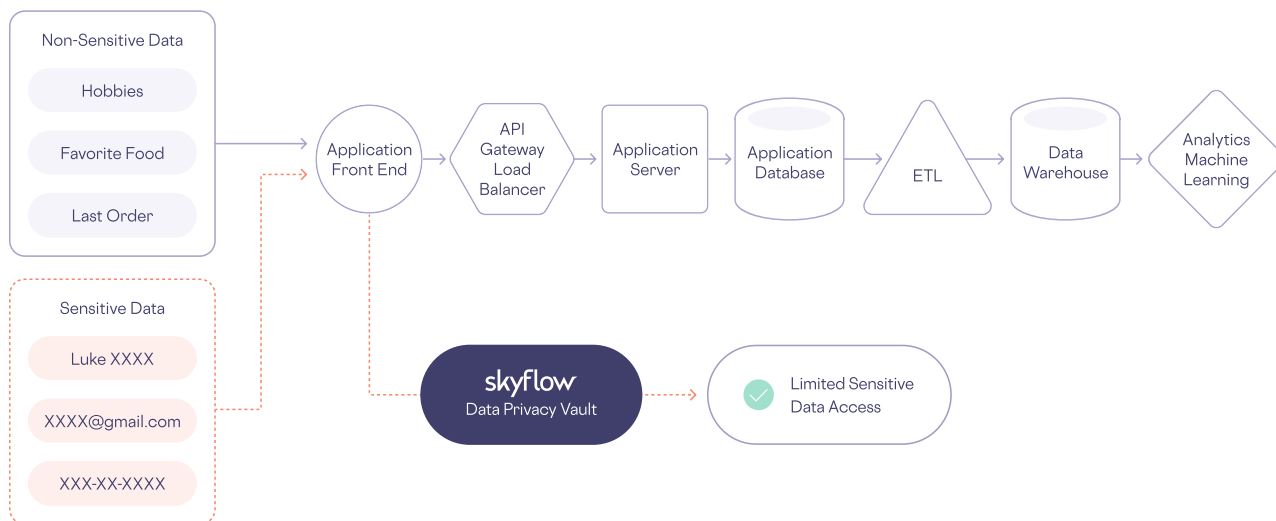

Get up and running quickly with new and updated regulations like **GDPR, HIPAA, EU AI Act, PCI**, and more.

Innovate Rapidly

Protect against data breaches and **free up developer and data teams** to focus on your core product.

Protect Customer Data Wherever It Resides

Across AWS, Azure, GCP and any multi-cloud, multi-app environment, no matter how distributed.

Trusted by

How Skyflow Helps

Protect sensitive data while improving developer productivity, up-leveling customer experience, and easing compliance.

Secure PII Across Your Stack

Rest easy knowing PII is de-identified, anonymized, and stored in a data privacy vault — an industry best practice that Apple and Netflix pioneered.

Fine-Grained Access Control

Give any team the PII they need to serve customers without breaking data privacy. Grant column- and row-level access in privacy-safe formats, restrict access by IP address, and more.

Always-Encrypted Analytics

Whether you're analyzing customer behavior or sifting through clinical trial data, you can query PII data without decrypting it and produce the masked dataset you need.

Data Residency Made Easy

Reduce barriers to entry into new markets by simplifying compliance. Skyflow enables you to quickly comply with emerging data residency standards, such as GDPR, DPDP, and PIPL.

Generative AI with No PII

Train LLMs without ever decrypting sensitive data like PII. Set role-based access controls to prevent unauthorized information in responses.

Data Breach Protection

Protect against data breaches with a best-in-class data privacy vault, whether you're collecting PII, payment data, health data, or training LLMs
